

**IN THE CLAIMS**

This listing of claims replaces all prior listings:

1. (Currently Amended) A positive active material comprising:

base particles comprising a lithium oxide compound and a transition metal; and  
a mechanofused mixture comprising an inorganic compound and a carbonaceous material on at least part of each surface of the base particles of the lithium oxide compound; and  
a weight ratio of the compound oxide to the coating materials is represented by the formula  $A:(B+C)$  where A is the weight of the compound oxide, B is the weight of the inorganic compound and C is the weight of the carbonaceous material,

wherein,

said mechanofused mixture is adhered to the base particles via shearing and compressive stress, and  
the weight ratio is between 98:2 to 70:30.

2. (Previously Presented) The positive active material according to Claim 1, wherein the inorganic compound comprises a compound oxide of at least one selected from the group of  $\text{LiFePO}_4$  and  $\text{Li}_3\text{PO}_4$ .

3. (Original) The positive active material according to Claim 1, wherein the weight ratio of the inorganic compound to the carbonaceous material ranges between 99:1 and 60:40.

4. (Cancelled)

5. (Currently Amended) A nonaqueous electrolyte secondary battery comprising:

a negative active material;

a positive active material comprising base particles of a lithium oxide compound and a transition metal;

a nonaqueous electrolyte between the negative and positive active materials; and

a mechanofused mixture comprising an inorganic compound and a carbonaceous material on at least part of each surface of the base particles of the lithium oxide compound; and

a weight ratio of the compound oxide to the coating materials is represented by the formula  $A:(B+C)$  where A is the weight of the compound oxide, B is the weight of the inorganic compound and C is the weight of the carbonaceous material,

wherein,

said mechanofused mixture is adhered to the base particles via shearing and compressive stress,

the weight ratio is between 98:2 to 70:30, and

the inorganic compound comprising a compound oxide of at least one selected from the group of  $\text{LiFePO}_4$  and  $\text{Li}_3\text{PO}_4$ .

6. (Previously Presented) The positive active material according to Claim 5, wherein the weight ratio of the inorganic compound to the carbonaceous material ranges between 99:1 and 60:40.

7. (Cancelled)
